

TEAM MANAGEMENT SYSTEM

User Guide

Everything you need to plan work on boards, assign it to the right people, and move every task from idea to done — for Leaders and Members.

For Leaders

For Members

GCGC Team Management System · Version 1.0

START HERE

What's in this guide

Read top to bottom for a full tour, or jump to what you need. Sections marked **LEADER** are for team leaders and admins.

- 1 **The basics** — what the system is, roles, signing in
- 2 **Your dashboard** — what the numbers mean
- 3 **Boards & the Kanban view** — create, customize columns & fields
- 4 **Tasks** — create, assign, kinds of work, the lifecycle
- 5 **Working together** — comments, @mentions, notifications
- 6 **Views** — Board vs Timeline (Gantt), Calendar
- 7 **Leading a team** — Member Management, Workload, Teams **LEADER**
- 8 **Collecting requests** — intake forms & Excel export **LEADER**
- 9 **Quick reference** — Leader vs Member at a glance

Who's who

Role	What they do
ADMIN	Runs the whole system — manages users, every team and board, and global settings.
LEADER	Runs their team's work — creates and customizes boards, assigns tasks, reviews and signs off completed work, and sees their members' workload.
MEMBER	Does the work — picks up tasks, moves them across the board, submits finished work for review, and collaborates through comments.

GOOD TO KNOW

Most features look the same for everyone. The difference is **permission**: Members do and submit work; Leaders and Admins set it up and sign it off. Wherever that matters, this guide flags it.

SECTION 1

The basics

GCGC TMS is where your team's work lives — planned on boards, assigned to people, and tracked from start to finish.

Signing in & registering

- 1 Go to the GCGC site and choose **Register** (new account) or **Sign in**.
- 2 On the registration form, fill in your name, work email, a username, and a password. If you're a team leader, tick "**Click if Leader.**"
- 3 Pick the leader you **report to** (type to search), then your place in the org — Division, Department, and so on.
- 4 Submit, then sign in. You'll land on your dashboard.

TIP

You'll stay signed in on your device. Use **Sign Out** (bottom of the left menu) on shared computers.

Finding your way around

The left menu is your map. The exact items depend on your role:

- **Dashboard** — your at-a-glance summary.
- **Tasks** — your boards and the Kanban view (where most work happens).
- **Teams** — the teams you belong to.
- **Calendar** — tasks and events on a calendar.
- **Team Overview & Member Management** **LEADER** — see and manage the people who report to you.
- **Profile & Notifications** — your account and your inbox.

SECTION 2

Your dashboard

The dashboard answers one question fast: *what needs my attention?*

What the numbers mean

You'll see	What it tells you
To Do	Work assigned to you that hasn't started.
In Progress	What you're actively working on.
In Review	Work you've submitted that's waiting for sign-off.
Completed	Work that's been approved and finished.
Overdue	Tasks past their due date that aren't done yet — clear these first.

LEADER

Your dashboard also rolls up your **team's** activity, so you can spot bottlenecks and who's overloaded without opening every board.

Tip: the numbers are live. As tasks move across the board, the dashboard updates on its own.

SECTION 3

Boards & the Kanban view

A **board** is a place for a team’s work. Each board is a Kanban: columns you drag tasks across, from *To Do* to *Done*.

The board, at a glance

● To Do

New work, not started.

● In Progress

Being worked on now.

● In Review

Submitted, awaiting sign-off.

● Completed

Approved and done.

Move a task by dragging its card to another column, or use the **+** on a column to add a task straight into it. The card shows the task title, who it’s assigned to, priority, due date, and a progress bar.

Use the **All Tasks** tab to see work across every board you’re on, or click a board’s tab to focus on just that one. When a board has lots of tasks, use **Load more** at the bottom of a column.

Creating a board

- 1

On the Tasks page, open the board strip and choose **New personal board** (or a board is created automatically when a team is created).
- 2

Give it a name. It starts with the four default columns above, so it’s ready immediately.
- 3

It’s yours to shape — see *Customize* below.

LEADER / BOARD OWNER

Anyone can have a personal board. **Team boards** are created with a team and shared with everyone on it.

Customizing a board LEADER / OWNER

Open a board and click **Customize** (the gear). You’ll find three tabs:

Tab	What you can do
Statuses	Add, rename, recolor, and reorder the board’s columns. Each status maps to a category (To Do / In Progress / In Review / Completed) that drives the rules — e.g. a “Completed” column needs sign-off, an “In Review” column shows 90% progress. The four defaults can’t be deleted.
Fields	Add custom fields to every task on the board — Text , Number , Date , or Dropdown (e.g. “Client,” “Budget,” “Priority tier”). They appear on the task form and in the Excel export.
Forms	Create a public intake form (covered in Section 8).

WHY CATEGORIES MATTER

You can name a column anything (“QA,” “Shipped”), but its **category** is what the system understands. That’s how custom columns keep working with progress, overdue, and sign-off rules.

SECTION 4

Tasks

A task is a single piece of work. You don't pick a "type" — you just describe the work, assign it to people, and choose how it behaves.

Creating a task

- 1 Click **New Task** (or the + on a column).
- 2 Add a **title** and optional description.
- 3 Set **priority** (Low → Urgent) and **start / due dates**.
- 4 Under **Assigned To**, add one or more people — like Monday or Jira, there's no single "owner." Leave it empty to assign it to yourself.
- 5 Fill in any custom fields the board has, then **Create Task**.

Kinds of work

Every task is a normal task by default. Two optional behaviors cover repeating and multi-step work — pick one with the **Recurring** | **Cascading** toggle (a task can be one or the other, not both):

Kind	Use it when...
Standard	It's a one-off piece of work assigned to one or more people.
Recurring	The work repeats on a schedule — daily, weekly, or monthly. The next one is created automatically; you can set an end date or run it indefinitely.
Cascading	The work is a sequence of ordered steps . Each step is assigned to someone and unlocks the next only when it's completed.
Subtasks	On a standard task, break it into smaller checklist items, each assignable to a team member.

NOTE

There's no Individual / Team / Collaboration "task type" anymore. **The board is the context** (team vs personal), and you simply assign a task to one or more people.

The task lifecycle — and who can do what

This is the heart of the system. Work flows left to right, and the **final sign-off is reserved** so nobody marks their own work done.

Stage	What it means	Who can move it here
To Do	Not started.	Anyone assigned
In Progress	Being worked on.	Anyone assigned
In Review	Submitted for sign-off (progress reads 90%).	Anyone assigned
Completed	Approved and finished (100%).	Creator, board leader, or admin only

LEADER — SIGNING OFF WORK

When a task reaches **In Review**, open it, rate the **work quality**, and move it to **Completed**. If it needs another pass, send it back. Members can take a task all the way to *In Review* but can't complete it themselves.

Progress, priority & custom fields

- **Progress** follows the column (In Review = 90%, Completed = 100%) and can be nudged manually on a task.
- **Priority** and **due date** show on the card; overdue tasks are flagged.
- **Custom fields** (if the board has them) appear on the task form and in its details.

SECTION 5

Working together

Most coordination happens right on the task — through comments, mentions, and notifications.

Comments & @mentions

- Open a task and scroll to **Comments** to discuss the work in context.
- Type @ and a name to **mention** someone — they'll be notified. You can only mention people who have access to the task (its assignees, members, and collaborators).
- Mentions are highlighted in the comment so they're easy to spot.

NOTE

Mentioning *yourself* won't notify you — notifications are for letting *other* people know.

Notifications

The bell (top-left) is your **inbox**. You're notified when something involves you:

You get notified when...	Who's notified
A task is assigned to you (or you're added to it)	The assignee
You're @mentioned in a comment	The person mentioned
A task is submitted for review	The leader/creator
A task you're assigned is completed	The assignee
You're added to a board	The new board member

Notifications always appear in your inbox, and can also reach you by **email** and **browser push** — toggle those in **Profile** → **Notification settings**.

SECTION 6

Different ways to see your work

Board

The Kanban — columns of cards you drag across stages. Best for the day-to-day “what’s where.”

Timeline (Gantt)

Tasks on a calendar grid by date. Switch with the **Board / Timeline** toggle. Drag a task bar to reschedule, or drag a date-less task onto the grid to schedule it. Zoom from day to year.

Calendar

The **Calendar** page shows tasks and events by day. If Google Calendar is connected, due dates and events stay in sync both ways.

SECTION 7 · LEADER

Leading a team

These tools are for leaders and admins — to see your people's work and balance the load.

Member Management

See everyone who reports to you and dig into any person's tasks. From here you can review what a member is working on, their progress, and step in where needed.

Workload

A live read of **how busy each person is** — their open, in-progress, in-review, and overdue counts. A person is "available" when they have nothing active. Use it to spot who's overloaded before assigning more.

TIP

Workload counts every task a person is assigned to — not just ones where they're the only assignee — so shared work is counted fairly.

Teams & boards

- Creating a **team** automatically creates its shared **board**.
- As the team's leader you can **customize** its statuses, fields, and forms (Section 3).
- Adding someone to a board notifies them and gives them access to that board's work.

SECTION 8 · LEADER

Collecting requests & exporting

Intake forms

An intake form is a **shareable link** that turns submissions into tasks — so people who don't use the system (other departments, clients, vendors) can send you work without an account.

- 1 On a board, open **Customize** → **Forms** and create a form (title, the column it lands in, and a default assignee).
- 2 **Copy the link** and share it.
- 3 Each submission becomes a task on your board, pre-filled with the submitter's name, email, and your board's custom fields. The assignee is notified.
- 4 Turn a form off anytime with its **on** toggle.

HEADS UP

Anyone with the link can submit, so share it deliberately. Built-in protections keep out casual spam.

Export to Excel

Click **Export** on the Tasks page to download an **.xlsx** of the current board — respecting your active filters and search. Columns include title, status, assignees, priority, dates, progress, and any custom fields.

SECTION 9

Leader vs Member — at a glance

Can you...	Member	Leader / Admin
Create tasks & personal boards	✓	✓
Be assigned work & move it To Do → In Progress → In Review	✓	✓
Comment & @mention	✓	✓
Submit work for review	✓	✓
Mark a task Completed & rate work quality	—	✓
Customize a board (statuses, fields, forms)	—	✓ (own/led boards)
See Member Management & Workload	—	✓
Create intake forms & export	—	✓

A typical flow

Member	Leader
Picks up a To Do task, moves it to In Progress.	Sets up the board and assigns the work.
Does the work, posts updates, @mentions when blocked.	Watches Workload; unblocks where needed.
Moves it to In Review when done.	Reviews, rates quality, marks it Completed — or sends it back.

NEED A HAND?

If something isn't behaving as described here, contact your team leader or your GCGC administrator.
